Education

2016 - 2021

Bachelor Degree in Computer Engineering

La Salle BCN, Ramon Llull University.

2026

AWS Certified Solutions Architect – Associate

Work Experience

RTX (2025-ACT) Platform / Cloud Engineer

Worked on a large-scale cloud platform deployed in AWS and orchestrated with Kubernetes. Contributed to the design and implementation of CI/CD pipelines for end-to-end testing, building them from the ground up while taking into account the project's complex distributed infrastructure. Collaborated with engineering teams to define the architecture supporting these testing workflows, ensuring scalability, reliability, and seamless integration with the existing cloud environment.

NUVOLAR (2024-ACT) Platform / Cloud Engineer

As the DevOps Engineer responsible for the company's main backend platform, I manage production cloud infrastructure deployed in AWS and Google Cloud, orchestrated with Kubernetes. My role includes implementing CI/CD pipelines, configuring monitoring and alerting systems using CloudWatch and observability tooling, and provisioning infrastructure through Infrastructure-as-Code (Terraform). I am responsible for FinOps practices, reviewing and optimizing AWS usage and billing, and managing AWS Organizations with our AWS partners to improve cost efficiency. I have also participated in company security audits, working directly with auditors and updating infrastructure, logging, and monitoring configurations to meet security and compliance requirements.

NUVOLAR (2021-2023) Backend / DevOps Developer

Contributed to the development of the Scheduling Engine, a distributed microservices-based system designed to optimize flight crew assignment. Developed backend services in Java using the Spring framework, with a focus on scalability, modularity, and maintainability. Participated in migrating manually provisioned infrastructure to Infrastructure-as-Code, improving reproducibility and deployment consistency. Actively contributed to architectural design and performance tuning of a system built to support high availability and operational efficiency.

V2M (2019-2021) Software Developer

Worked in a consulting role primarily focused on mobile app development and backend services, mainly using Python. I contributed to multiple projects, including supporting the Mobile World Congress 2021 (MWC2021) app.
