Education

2016 - 2021

Bachelor Degree in Computer Engineering

La Salle BCN, Ramon Llull University.

Cloud and backend engineer with strong experience in designing and maintaining distributed systems, cloud-native infrastructure, and backend platforms. Skilled in both Python and Java, with a focus on high-performance, scalable solutions deployed across Kubernetes clusters in AWS and GCP. Experience in Infrastructure-as-Code (Terraform), CI/CD automation, and autoscaling systems. Comfortable working in critical, high-availability environments. Passionate about building reliable platform tooling and backend systems that enable fast, secure, and resilient software delivery.

Work Experience

NUVOLAR (2024-ACT)

DevOps / Cloud Engineer

As the DevOps Engineer responsible for the company's main backend platform, I manage distributed cloud infrastructure deployed in AWS and Google Cloud, orchestrated with Kubernetes. My role includes implementing CI/CD pipelines, configuring monitoring and alerting systems, and provisioning resources using Infrastructure-as-Code (Terraform). I recently designed and deployed a fully automated system for Bitbucket self-hosted runners with Python-based autoscaling logic, running on Hetzner Cloud. I also oversee company-wide cloud operations, ensuring scalability, security, and cost-efficiency across environments.

NUVOLAR (2021-2023)

Backend Developer

Contributed to the development of the Scheduling Engine, a distributed microservices-based system designed to optimize flight crew assignment. Developed backend services in Java using the Spring framework, with a focus on scalability, modularity, and maintainability. Implemented asynchronous communication between services using RabbitMQ, ensuring reliable message delivery and system decoupling. Actively participated in the architectural design and performance tuning of a system built to support high availability and operational efficiency.

V2M (2019-2021)

Software Developer

Worked in a consulting role primarily focused on mobile app development and backend services, mainly using Python.

I contributed to multiple projects, including supporting the Mobile World Congress 2021 (MWC2021) app.
